Professional Summary

Final-year Computer Science (AI & ML) student with hands-on experience in cloud-hosted backend systems, RESTful API architecture, and data-driven engineering, delivering measurable efficiency gains at Cognifyz Technologies. Skilled at translating business requirements into technical solutions and driving adoption of scalable, cloud-native architectures.

Education

VIT Bhopal University

B.Tech in Computer Science & Engineering (AI & ML) — CGPA: 8.48/10

Jul 2023 – May 2027

Bhopal, India

Work Experience

Data Science & Analytics Intern

Oct 2025 – Nov 2025

Cognifyz Technologies

- Improved reporting accuracy by 35% and cut data-preparation overhead by 40% across 50,000+ enterprise records by building reusable Python (pandas, NumPy) EDA and feature-engineering pipelines, resolving 15+ critical anomalies via statistical outlier detection.

Key Projects

AI-First CRM for Healthcare Professionals (HCP)

[GitHub](#)

React, Redux, FastAPI, LangGraph, PostgreSQL

- Reduced manual HCP interaction-logging effort by architecting an AI-first CRM module using LangGraph-orchestrated agents to automate healthcare-professional workflows.
- Enabled real-time, stateful CRM operations by building a React + Redux frontend backed by a FastAPI service layer, with PostgreSQL as the system of record — full-stack ownership of an agent-driven system.

TrustTape Copilot

[Live Demo](#)

React, Node.js/Express, TypeScript, Neon Postgres (Prisma), Google Gemini API

- Cut loan-tape onboarding time from days to minutes, evidenced by ingesting 1,528+ institutional records at a 0% failure rate, by architecting an automated parsing and rules-validation pipeline.
- Surfaced 13 organized fraud syndicate risk clusters across linked loan records, measured via component-level entity graphs, by implementing graph-theory-based entity resolution (DFS traversal) for fraud ring detection.
- Reduced manual reviewer workload on flagged exceptions, tracked through confidence-scored correction payloads, by building an LLM-powered (Gemini) Copilot with a Maker-Checker RBAC approval workflow.
- Delivered real-time compliance visibility across 21,000+ scanned records and a live compliance-rate metric, secured through SHA-256 cryptographic integrity hashing, by building an executive audit-summary dashboard.

APS Sensor Fault Prediction System

[GitHub](#)

Python, MongoDB Atlas, AWS S3, Docker, FastAPI, XGBoost

- Processed 36,188+ records from MongoDB Atlas by architecting a modular, 6-stage data pipeline (ingestion, validation, transformation, training, evaluation, S3 deployment), applying distributed pipeline design principles applicable to scalable backend systems.
- Achieved production robustness by engineering custom logging, exception handling, and retry logic across all pipeline stages, with YAML-based config management for dev/test/production environments.

Technical Skills

- Languages:** Java, Python, SQL, JavaScript
- Backend & Frameworks:** Spring Boot, Hibernate ORM, Microservices, REST APIs, FastAPI, WebSockets, SQLAlchemy, JWT Authentication, Pydantic, Redis Caching
- Cloud & DevOps:** AWS (S3, SDK), Google Cloud Platform, Docker, Kubernetes, Git/GitHub, CI/CD, Postman
- Databases:** MySQL, MongoDB (Atlas), PostgreSQL, Redis, Schema Design, H2, Query Optimization & Indexing
- Frontend:** React.js, Redux, Tailwind CSS, TypeScript, Node.js, Bootstrap
- Core CS:** Operating Systems, Computer Networks, DBMS, OOP, System Design, Agile/Scrum SDLC

Achievements & Leadership

- President, The Linpack Club, VIT Bhopal
- Runner-Up, IEEE Hackathon, VIT Bhopal (Coding Ninjas)
- Top-50 in India, AI Agent Creator Challenge (Unstop)
- Winner, SRDI Igniters Innovation Challenge (Suzuki R&D Center India)

Certifications

Applied Machine Learning (University of Michigan) | IBM RAG & Agentic AI | MongoDB Developer's Toolkit (GfG)
DBMS: Fundamentals & Advanced (Scaler) | Infosys Springboard AI | Google IT Support Professional
Google Data Analytics Professional
