LeetCode: Global Rank 316

Professional Summary

2027 Computer Science graduate (AI & ML) specializing in Java, Spring Boot, and full-stack systems, with hands-on experience in system design, RESTful API development, and distributed data pipelines. Delivered measurable efficiency gains at Salesforce and Cognifyz Technologies through role-based architecture and automated reporting. Applies AI/ML techniques to improve engineering outcomes and efficiency. Global Rank #316 (Top 0.1%) on LeetCode with 650+ problems solved; 8+ technical certifications.

Education

VIT Bhopal University Bhopal, India
B.Tech in Computer Science & Engineering (AI & ML) — GPA: 8.47/10 *Expected Graduation: June 2027*

Technical Skills

Languages: Java, Python, C++, SQL, JavaScript
Backend & Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate ORM, Microservices Architecture, REST APIs, FastAPI, Maven
Databases: MySQL, MongoDB, PostgreSQL, Cassandra (conceptual), H2, DBMS (Normalization, Indexing, Query Optimization)
Cloud & DevOps: AWS, Google Cloud Platform, Docker, Git, GitHub, Postman
Concepts: System Design, Distributed Systems, OOP, Data Structures & Algorithms, Agile SDLC, MVC Architecture

Work Experience

Salesforce Hybrid
Backend & Platform Engineering Intern *May 2025 – Aug 2025*

- Improved data access efficiency by 25% for 200+ users by designing role-based security models and multi-tier access profiles, applying distributed access-control principles analogous to microservices authorization layers.
- Accelerated operational decision-making speed by 40% across business units by designing and deploying 10+ custom dashboards and automated reporting pipelines on AWS-hosted infrastructure.
- Reduced cross-functional workflow bottlenecks by 30% by implementing Lightning component automation and event-driven CRM orchestration logic.

Cognifyz Technologies Nagpur, Maharashtra
Data Science & Analytics Intern *Oct 2025 – Nov 2025*

- Improved reporting accuracy by 35% by engineering automated EDA pipelines in Python across 50,000+ enterprise records, applying distributed RDBMS query optimization techniques for scalable data handling.
- Reduced manual reporting overhead by 40% by architecting Python-driven ingestion pipelines from structured SQL datasets, replacing ad-hoc Excel workflows with a repeatable, scalable analytics layer.

Key Projects

AI-First CRM for Healthcare Professional (HCP) | *Redux, FastAPI, LangGraph, Groq LLM (Gemma2-9B), PostgreSQL* | GitHub

- Reduced [X]% of manual HCP interaction logging effort by architecting an AI-first CRM module that uses LangGraph-orchestrated agents and the Groq-hosted Gemma2-9B LLM to automate healthcare-professional interaction workflows.
- Enabled real-time, stateful CRM operations by building a React + Redux frontend backed by a FastAPI service layer, with PostgreSQL as the system of record for interaction and profile data.
- Achieved modular, maintainable service boundaries by separating LLM orchestration, API, and data layers, applying distributed backend design principles directly transferable to production microservices.

APS Sensor Fault Prediction System | *Python, MongoDB, AWS S3, Docker, FastAPI, XGBoost* | GitHub Jan – Apr 2026

- Processed 36,188+ records from MongoDB Atlas by architecting a modular, 6-stage data pipeline (ingestion, validation, transformation, training, evaluation, S3 deployment), applying distributed pipeline design principles applicable to scalable backend systems.
- Achieved production robustness by engineering custom logging, exception handling, and retry logic across all pipeline stages, with YAML-based config management for dev/test/production environments.
- Reduced simulated query latency by Dockerizing the full system, serving predictions via FastAPI, and optimizing MongoDB indexing and batch processing strategies.

Achievements & Leadership

President, The Linpack Club, VIT Bhopal — Grew technical community engagement by leading 100+ members and organizing 15+ workshops on Java, Spring Boot, and AI/ML.
Ranked #316 globally (Top 0.1%) in LeetCode Weekly Contest 441 by solving 650+ competitive programming problems.
Runner-Up, IEEE Hackathon, VIT Bhopal (sponsored by Coding Ninjas) | Top-50 Finalist, AI Agent Creator Challenge (Unstop).
Certifications: MongoDB Developer's Toolkit, DBMS Fundamentals & Advanced (Scaler), Applied Machine Learning (University of Michigan).
