

Abhyanand Sharma

+91-8780334261    Leetcode

Professional Summary

2027 Computer Science graduate (AI & ML) specializing in Java, Spring Boot, and full-stack systems, with hands-on experience in system design, RESTful API development, and distributed data pipelines. Delivered measurable efficiency gains at Salesforce and Cognifyz Technologies through role-based architecture and automated reporting. 8+ technical certifications.

Education

VIT Bhopal University

B.Tech in Computer Science & Engineering (AI & ML) — CGPA: 8.48/10

Jul 2023 – May 2027

Bhopal, India

Technical Skills

Languages: Java, Python, C++, SQL, JavaScript

Backend & Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate ORM, Microservices Architecture, REST APIs, FastAPI, Maven

Frontend: React.js, Redux, TypeScript, Node.js, Bootstrap

Databases: MySQL, MongoDB (Atlas), PostgreSQL, H2, Query Optimization & Indexing

Cloud & DevOps: AWS (S3, cloud-native infra), Google Cloud Platform, Docker, Kubernetes (conceptual), Git/GitHub, CI/CD

Core CS: Data Structures & Algorithms, OOP, Distributed Systems, System Design, Agile/Scrum SDLC

Work Experience

Salesforce

Hybrid

Backend & Platform Engineering Intern

May 2025 – Aug 2025

- Improved data access efficiency by 25% for 200+ users by designing role-based security models and multi-tier access profiles, applying distributed access-control principles analogous to microservices authorization layers.
- Accelerated operational decision-making speed by 40% across business units by designing and deploying 10+ custom dashboards and automated reporting pipelines on AWS-hosted infrastructure.
- Reduced cross-functional workflow bottlenecks by 30% by implementing Lightning component automation and event-driven CRM orchestration logic.

Cognifyz Technologies

Nagpur, Maharashtra

Data Science & Analytics Intern

Oct 2025 – Nov 2025

- Improved reporting accuracy by 35% by engineering automated EDA pipelines in Python across 50,000+ enterprise records, applying distributed RDBMS query optimization techniques for scalable data handling.
- Reduced manual reporting overhead by 40% by architecting Python-driven ingestion pipelines from structured SQL datasets, replacing ad-hoc Excel workflows with a repeatable, scalable analytics layer.

Key Projects

AI-First CRM for Healthcare Professionals (HCP) | *React, Redux, FastAPI, LangGraph, PostgreSQL* | [GitHub](#)

- Reduced manual HCP interaction-logging effort by architecting an AI-first CRM module using LangGraph-orchestrated agents to automate healthcare-professional workflows.
- Enabled real-time, stateful CRM operations by building a React + Redux frontend backed by a FastAPI service layer, with PostgreSQL as the system of record — full-stack ownership of an agent-driven system.

E-Commerce Platform | *Spring Boot, Microservices, JPA, Hibernate, REST APIs, H2, Bootstrap* | [GitHub](#)

- Architected a modular, extensible backend using Spring Boot microservices with RESTful APIs and MVC separation, designed for horizontal scalability and clean service boundaries.
- Implemented shopping cart, order processing, and dynamic product catalog with discount logic using Spring Data JPA and Hibernate ORM for efficient database operations.

APS Sensor Fault Prediction System | *Python, MongoDB Atlas, AWS S3, Docker, FastAPI, XGBoost* | [GitHub](#)

- Processed 36,188+ records from MongoDB Atlas by architecting a modular, 6-stage data pipeline (ingestion, validation, transformation, training, evaluation, S3 deployment), applying distributed pipeline design principles applicable to scalable backend systems.
- Achieved production robustness by engineering custom logging, exception handling, and retry logic across all pipeline stages, with YAML-based config management for dev/test/production environments.
- Reduced simulated query latency by Dockerizing the full system, serving predictions via FastAPI, and optimizing MongoDB indexing and batch processing strategies.

Achievements & Leadership

- President, The Linpack Club, VIT Bhopal** — Led a 100+ member club and organized 15+ workshops on Java, Spring Boot, and AI/ML.
- Runner-Up, IEEE Hackathon, VIT Bhopal** (Coding Ninjas)
- Top-50 in INDIA, AI Agent Creator Challenge** (Unstop)

Certifications

Applied Machine Learning (University of Michigan) | IBM RAG & Agentic AI (IBM) | MongoDB Developer's Toolkit (GeeksforGeeks) | Google Cloud: Generative AI Learning Path | DBMS: Fundamentals & Advanced (Scaler)
