

Abhyanand Sharma

Software Development Engineer | Java & Spring Boot | Backend Systems | Distributed Computing

+91-8780334261 | abhyanandsharma20@gmail.com

linkedin.com/in/abhyanand-sharma | github.com/AbhyanandSharma2005 | LeetCode Profile

Professional Summary

Java backend engineer specialising in **Spring Boot microservices**, **RESTful APIs**, and **distributed systems** — with production exposure across cloud-native (AWS) and enterprise-scale platforms. Delivered **40% faster reporting**, **25% access efficiency gains**, and processed **50,000+ records** at Salesforce and Cognifyz. **Global #316 on LeetCode** (650+ problems) | Published AI/ML research | 8+ certifications. Writes modular, performant code built for scale.

Education

VIT Bhopal University

B.Tech in Computer Science & Engineering (AI & ML) – CGPA: 8.53/10

Bhopal, India

July 2023 – May 2027

Technical Skills

Languages & Core: Java, Python, C++, SQL, JavaScript, HTML5, CSS3

Backend & Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate ORM, Microservices Architecture, REST APIs, Maven, Lombok

Databases: MySQL, MongoDB, Cassandra (conceptual), H2 Database, DBMS (Normalization, Indexing, Query Optimization)

Cloud & DevOps: AWS (Salesforce cloud-native), Google Cloud Platform, Git, GitHub, Postman, IntelliJ IDEA

AI/ML: Machine Learning, RAG (Retrieval-Augmented Generation), Agentic AI, Generative AI

Concepts & Methodologies: Distributed Systems, OOP, Data Structures & Algorithms, Agile SDLC, MVC Architecture, Defensive Coding

Work Experience

Backend & Platform Engineering Intern

Salesforce

May 2025 – Aug 2025

Hybrid

- Improved data access efficiency by 25% for 200+ users by architecting role-based security models, permission sets, and multi-tier access profiles — applying distributed access-control principles analogous to those used in microservices authorization layers.
- Accelerated operational decision-making speed by 40% across business units by designing and deploying 10+ custom dashboards and automated reporting pipelines, replacing manual SQL queries with scalable data retrieval workflows on Salesforce's cloud-native infrastructure (AWS-hosted).
- Reduced workflow bottlenecks by 30% across cross-functional teams by implementing Lightning component automation and CRM orchestration logic, applying event-driven programming patterns foundational to distributed system design.

Data Science & Analytics Intern

Cognifyz Technologies

Oct 2025 – Nov 2025

Nagpur, Maharashtra

- 35% reporting accuracy improvement** achieved by engineering automated EDA pipelines in Python (pandas, NumPy) across 50,000+ enterprise records — applying distributed RDBMS query optimisation techniques for scalable data handling.
- 40% reduction in manual reporting overhead** delivered by architecting Python-driven ingestion pipelines from structured SQL datasets, replacing ad-hoc Excel workflows with a repeatable, scalable analytics layer.
- 15+ critical data anomalies resolved** by applying indexing and statistical pattern recognition strategies, mirroring query optimisation techniques used in high-throughput NoSQL stores (Cassandra, MongoDB) to minimise retrieval latency.

Key Projects

E-Commerce Platform | Spring Boot, Microservices, JPA, Hibernate, REST APIs, H2, Bootstrap Mar – Jul 2025

- Architected a modular, extensible backend using **Spring Boot microservices** with RESTful APIs and MVC separation — designed for horizontal scalability and clean service boundaries.
- Implemented shopping cart, order processing, and dynamic product catalog with discount logic using **Spring Data JPA and Hibernate ORM** for efficient database operations.
- Applied defensive coding practices and layered service design; built responsive frontend with **Thymeleaf and Bootstrap 5** for seamless user experience.

Social Media Automation App | *React.js, TypeScript, Vite, Node.js, REST APIs, CSS3* May 2026

- Architected a **full-stack social media scheduling platform** using React + TypeScript frontend and Node.js/Express REST backend with multi-platform scheduling, rich content editors, and responsive UI.
- Implemented **React Context API based global state management** and modular component architecture, improving maintainability by separating scheduling, authentication, and dashboard workflows.
- Integrated **end-to-end REST API communication** between frontend and backend for authentication, scheduling operations, and real-time data handling with robust error management.
- Maintained **TypeScript strict mode across 98%+ of the codebase**, improving type safety and enabling scalable feature development.

APS Sensor Fault Prediction System | *XGBoost, Python, MongoDB, AWS S3, Docker, FastAPI* Jan – April 2026

- **Built a production-grade, end-to-end ML pipeline** processing **36,188+ real sensor records**: MongoDB Atlas ingestion → YAML schema validation → feature engineering → XGBoost training → model artefact deployment to **AWS S3** — covering the full MLOps lifecycle.
- Trained and tuned an **XGBoost classifier with L1/L2 regularisation and early stopping** for APS fault detection; evaluated using precision, recall, F1-score, and AUC-ROC; implemented baseline model comparison for robust model selection.
- Engineered production resilience: **custom logging and exception handling** across all pipeline stages, batch processing for memory-efficient large-scale data handling, and connection pooling with automatic retry logic for MongoDB Atlas and AWS S3.
- **Dockerised the full pipeline** for environment-consistent deployment; served predictions via FastAPI; implemented YAML-based config management enabling seamless dev/test/production environment switching.

Achievements & Leadership

President, The Linpack Club

Jun 2025 – Apr 2026

VIT Bhopal University

- Led 100+ member technical club; organised 15+ workshops on Java, Spring Boot, and AI/ML

Global Rank 316 / LeetCode Weekly Contest 441 — Top 0.1% among all participants worldwide | 650+ problems solved

Runner-Up — IEEE Hackathon at VIT Bhopal (sponsored by Coding Ninjas)

Top-50 Finalist — AI Agent Creator Challenge, Unstop platform

Certifications

MongoDB Developer's Toolkit — GeeksforGeeks

DBMS: Fundamentals & Advanced —Scaler

Applied Machine Learning — University of Michigan

Google Data Analytics Professional Certificate — Google

Google Cloud: Generative AI Learning Path — Google Cloud
