Professional Summary

Data Engineering professional with hands-on experience designing end-to-end data pipelines, analytical schemas, and cloud-native data architectures. Built and shipped a production-grade ML pipeline across MongoDB Atlas, AWS S3, and Docker — managing schema validation, transformation logic, and data quality across 36,000+ real records. Experienced in SQL-based data modeling, ELT pipeline design, and multi-source data integration. Seeking to apply strong data architecture foundations toward enterprise MDM, Lakehouse, and transactional data governance challenges.

Education

VIT Bhopal University

B.Tech in Computer Science & Engineering (AI & ML) — CGPA: 8.53/10

Bhopal, India

July 2023 – May 2027

Technical Skills

Data Modeling & Architecture: Conceptual, Logical & Physical Data Modeling; Dimensional Modeling (Star/Snowflake Schema); Canonical & Subject Area Models; Normalization; Data Dictionaries

Databases & Query: SQL (Advanced), MySQL, MongoDB Atlas (NoSQL), H2 Database; Query Optimization, Indexing, Schema Design, DBMS Fundamentals

Data Pipeline & ELT/ETL: Python (pandas, NumPy), PySpark (conceptual), FastAPI, REST APIs; Automated EDA Pipelines; Batch Processing; MongoDB → AWS S3 pipelines

Cloud & Lakehouse: AWS S3, Google Cloud Platform; Medallion Architecture (Bronze/Silver/Gold) concepts; Delta Lake & Unity Catalog (conceptual); Databricks fundamentals

Data Governance & Quality: Schema Validation (YAML-based), Data Completeness & Validity checks, Anomaly Detection, Metadata Management, Statistical Pattern Recognition

Integration & DevOps: Docker, Git/GitHub, Postman, YAML Config Management; Source-to-Target Mapping; Multi-environment (dev/test/prod) pipeline switching

Languages: Python, SQL, Java, C++

Work Experience

Backend & Platform Engineering Intern (PPO-track · Full-time offer from May 2027)

May 2025 – Aug 2025

Salesforce

Hybrid

- Designed and deployed **10+ automated reporting pipelines** on Salesforce's cloud-native (AWS) infrastructure — reducing manual SQL query overhead by **40%** across business units by replacing ad-hoc data retrieval with scalable, repeatable workflows directly analogous to ELT pipeline design.
- Architected **role-based security models, permission sets, and multi-tier access profiles** for 200+ users — improving data access efficiency by **25%** and applying access-control principles aligned with data governance and PII compliance frameworks.
- Implemented **event-driven orchestration logic** across cross-functional CRM workflows — reducing bottlenecks by **30%** by applying distributed pipeline design patterns applicable to transactional data integration across ERP and CRM systems.

Data Science & Analytics Intern

Oct 2025 – Nov 2025

Cognifyz Technologies

Nagpur, Maharashtra

- Created automatic EDA and feature engineering pipelines in Python (pandas, NumPy) for over 50,000 enterprise records - increased reporting accuracy by 35% via consistent methods of ingesting, transforming, and validating data..
- Architected **reusable Python ingestion pipelines** from structured SQL datasets — delivering **40% reduction in data preparation overhead** by replacing ad-hoc Excel workflows with a scalable, repeatable analytics layer mirroring MDM source system integration patterns.
- Detected and resolved **15+ critical data anomalies** using statistical pattern recognition and outlier detection — ensuring data completeness, validity, and conformity across enterprise datasets in alignment with data quality governance standards.

Key Projects

APS Sensor Fault Prediction | *Python, MongoDB Atlas, AWS S3, Docker, FastAPI, XGBoost* **Jan 2026 – April 2026**

- Architected a **modular, 6-stage end-to-end data pipeline** (ingestion → YAML schema validation → transformation → training → evaluation → S3 deployment) across **36,188+ real sensor records from MongoDB Atlas** — implementing source-to-target mapping, schema evolution handling, and metadata-driven config management directly analogous to enterprise MDM integration patterns.

- Implemented **YAML-based schema validation and data quality rules** (completeness, conformity, type-checking) across all pipeline stages — ensuring governed, high-quality data propagation from source through transformation to analytical output, mirroring Bronze/Silver/Gold medallion architecture.
- Engineered **production resilience** via custom logging, exception handling, connection pooling with retry logic for MongoDB Atlas and AWS S3, and batch processing for memory-efficient large-scale data handling — reducing simulated pipeline failure rate to near zero.
- Dockerised the full pipeline for environment-consistent deployment; served model outputs via **FastAPI REST layer**; applied **YAML-based multi-environment config switching** (dev/test/production) directly replicating enterprise data architecture deployment patterns.

Social Media Automation App | *React.js, TypeScript, Node.js, REST APIs, Vite*

May 2026

- Architected a **full-stack platform** with React + TypeScript frontend and Node.js/Express REST backend — implementing modular component architecture with clean service boundaries applicable to multi-domain data consumption patterns.
- Integrated **end-to-end REST API communication** for authentication, scheduling, and real-time data handling — applying source system integration patterns analogous to CRM/OMS/ERP data flow design.

Achievements & Leadership

President, The Linpack Club — VIT Bhopal University

Jun 2025 – Apr 2026

- Led 100+ member technical club; organised 15+ workshops on data engineering, Python, and AI/ML — demonstrating stakeholder communication and technical leadership skills.

LeetCode Global Rank #316 / Weekly Contest 441 — Top 0.1% worldwide | 650+ problems solved (Advanced SQL & Algorithms)

Runner-Up — IEEE Hackathon at VIT Bhopal (sponsored by Coding Ninjas)

Top-50 Finalist — AI Agent Creator Challenge, Unstop Platform

Certifications

Applied Machine Learning — *University of Michigan*

Google Data Analytics Professional Certificate — *Google*

Google Cloud: Generative AI Learning Path — *Google Cloud*

IBM RAG & Agentic AI — *IBM*

MongoDB Developer's Toolkit — *GeeksforGeeks*

DBMS: Fundamentals & Advanced — *Scaler*
